

Studley Entaco Green Report February 2022

Tue 8th Feb

Went over the green with the whip to disperse the worm casts.

Met John Mullins to clarify the order for the green maintenance products, (some confusion from Agrovista). Needed to decide if we had the order in two parts i.e. spring and summer, as the cost of materials is going up very rapidly decided to have it delivered all together in one lot.

Mon 14th Feb

Went to the green at 09:00am, Agrovista to deliver order, their delivery slot between 09:00 am and 5:00 pm, delivery arrived at 10:30 am, the driver moved the pallet close to the shed which was a big help. Had to have a sort out in the shed to enable storage of products then put away all the items.

The order was short of three items the Evolution naturelle micro spring, Intrench and one bag of Viano Bio Lime, apparently they were out of stock.

Cut the green height of cut 8mm and then spread the Viano Bio Lime over the green with the spreader.

Fri 25th February

Viano Bio Lime still on the green still not fully absorbed (*don't want to cut the green until the bio lime is absorbed other wise the mower will pick it up*).

Went over the green with the aerator using the slit tines.
