

# **Studley Entaco Green Report August 2022**

## **Fri 5<sup>th</sup>**

Cut the green with M.V assistance.

Treated the green with Aquasorb and Fossil.

Green starting to look dry and patchy, turned on the watering system to activate during early morning 04:00am.

## **Tue 9<sup>th</sup>**

Reports that the watering system had been coming on at about 08:00am. Looked several times for a reason, checked the clock times and days but could not see any reason for this unscheduled run time.

Called Paul Dutton to ask if he would come and have a look at the problem, Paul checked over the system but could not find any reason for this problem. Paul took the two programmes off and reset everything to “programme A” with start time at 04:00am, discarding “programme B” altogether. The system is now working as it should.

## **Fri 12<sup>th</sup>**

Cut the green with M.V assistance.

## **Wed 11<sup>th</sup>**

Cut the green, Bill McNeish and Rob Uzzell unable to attend.

## **Fri19th**

Cut the green with M.V assistance

Went over the green with the sorrel roller and then spray treated with “GoGreen Plus” and “Intrench”.

Checked and reset the height of cut on the mower (4.5mm).

Checked and reset cutters on the mower.

## **Wed 24<sup>th</sup>**

Arranged to meet John Mullins from Agrovista to look at the green and advise on the quantity of lawn sand we required to treat the moss in the green. Need eight 25ltr bags to treat the whole of the green but we have four bags in stock, ordered four bags to make up the total.

## **Fri 26<sup>th</sup>**

Cut the green with M.V assistance.

Checked and reset height of cut (4.5mm).

Checked and adjusted cutter to the mower.
