

Studley Entaco Green Report March 2022

Wed 9th

Cut the green height of cut 8mm.

Applied Fero Top treatment with the spreader.

Agrovista had delivered the completion of the order but had delivered it to the Top Club without informing me. Collected the items from the top club and stored them in the greenkeeping shed.

Gathered up the cardboard packaging and old plastic bags and other rubbish and took them to the Household Waste Site.

Wed 16th

Met Neal Hussey from TAG at the club, went through the maintenance and setting up of the Dennis mower, nice chap very helpful and a useful contact. Asked him if TAG hired out machinery and equipment but they don't and he didn't know of anywhere that did for the type of equipment we would need.

Reduced the height of cut on the mower to 7mm and then cut the green. Rain topped any other work on the green.

Wed 23rd

Used the whip to disperse worm casts from the green.

Used the grass rake to rake out patches of dead moss.

Lowered the height of cut on the mower to 6mm and then cut the green.

Fri 25th

Went over the green with the light brush to remove dew.

Changed the feet on the aerator to the pencil tines and then aerated the green.

Applied Evolution Natural (spring) and then turned on the watering system to water it in.

Sun 27th

Turned on the watering system to help watering treatment applied last Friday.

Wed 30th

Used the whip to disperse the worm casts.

Went over the green with the light brush to remove dew.

Raked out areas of dead moss.

Lowered the height of cut on the mower to 5.5 mm and cut the green.
