

Studley Entaco Green Report March 2023

Wed 1st

Turned off the watering system.

Scarified the green with the assistance from club members.

Applied "Floramid Twin Eagle Master" to green.

The Dennis Ultra mower would not run, the engine started o.k and the cutters would turn, but it would not drive. Took off the cover to the drive belt and discovered the drive belt had broken.

Phoned Tallis Amos and explained the situation as well as giving them the number of the belt.

Mon 20th

Visited the club to look over the green, noted it needed cutting.

Tue 21st

Tallis Amos had arranged to come out at 08:00am to attend to the mower, arrived at the club at 07:50am to find Tallis Amos were there waiting. The fitter looked at the mower and told me he had not been told the drive belt needed replacing and he did not have a drive belt with him and also that they did not have a drive belt in stock and that it would have to be ordered in. He explained that John Simpson would phone me to tell me when they had the drive belt and to organise another date to fit it. Apparently the information about the belt that I had given did not get through to the service department.

Mon 27th

Phoned Tallis Amos to chase up about the drive belt for the mower. John Simpson came back to me latter in the day to tell me they now had the drive belt and the earliest they could come out was next Thursday at 4:00pm.

Visited the club to look over the green, needed cutting.

Wed 29th

Went round to "Safety Plus" and ordered the safety equipment, one item not in stock, should be in the next day, they arranged to ring me when it arrived.

Thu 30th

Tallis Amos came out and fitted the new drive belt to the mower.

Collected safety equipment from "Safety Plus".

Fri 31st

Went over the green with the heavy brush prior to cutting the green, took off a lot of grass. Mower working well after having the drive belt replaced.

Very wet day.

Strimmed round the edges of the green.
